

Read-Only Access Agreement

EscapeBase44's undertaking that the Customer's app is only read during the evaluation, and how Base44 itself enforces it.

PROVIDER

EscapeBase44

Daniel Frishtik, a registered business based in Tel Aviv, Israel ("EscapeBase44").

CUSTOMER

ByteChew Soft Inc.

A software company based in Québec, Canada ("Customer"), for its application Agricote.

01 Purpose

The Customer creates a personal access token in Base44, limited to the Agricote app and to read-only permission, and gives it to EscapeBase44 so it can read the app and prepare a written offer: the price of the migration, the price of the offline work, and the setup each would use. Nothing else happens with that access.

02 What EscapeBase44 does with the access

- 01 Read only, enforced by Base44.** The app is read, never written to. The token cannot change anything and reaches no other app in the Customer's account: Base44 refuses any other operation, regardless of EscapeBase44.
- 02 Nothing is changed.** The app's code, data, files, settings, integrations and domains stay exactly as they are. Not a single record, file or line is modified.
- 03 Nothing is removed.** Nothing is deleted, archived, disabled or unpublished: no records, no files, no users, no functions, no settings.
- 04 Nothing is kept.** The app's code and records pass through EscapeBase44's evaluation program in memory and are not saved. What is kept is the result of the evaluation (names and counts: entities, functions, integrations, volumes; no source code, no records, no files) and the token itself, encrypted. If the Customer decides not to proceed, both are deleted.
- 05 The app keeps running.** The evaluation has no effect on the running app, its users or its performance, throughout and afterwards. Its users notice nothing.
- 06 Read for the offer only.** What is read is what an offer needs: the app's structure, its backend functions, its integrations, the volume of its data and files. Nothing is read for any other reason.
- 07 Revocable at any time.** The Customer can end the access at any time by deleting the token on the Base44 page where it was created; access ends that same moment, with nothing needed from EscapeBase44.
- 08 No commitment.** Giving the token creates no obligation to migrate, to order any work, or to pay anything. The offer is the Customer's to accept or decline.
